

Python Basics

Python is a high-level, interpreted programming language that is easy to learn and widely used.

Features of Python:

- Easy syntax
- Object-oriented programming
- Cross-platform support
- Large standard library

Data Types:

- Integer
- Float
- String
- Boolean
- List
- Tuple
- Dictionary
- Set

Control Statements:

Python uses if, elif, and else for decision making.

Loops:

Python provides for and while loops.

Functions:

Functions are created using the def keyword.

Python Applications:

- Web Development
- Machine Learning
- Artificial Intelligence
- Data Science

- Automation
